

# Life Systems

## Company Description

Life Systems is the industry's leading provider of point-of-care diagnostic data gathering devices. Our RosieConnect™ suite of products captures resident vitals and other diagnostic information electronically, including a resident and caregiver ID, and wirelessly transmits the data to an EMR, clinical software or pharmacy dispensing solution.

RosieConnect supports the Rosie II Vital Signs Monitor, a Bluetooth-enabled blood glucose meter, a portable wheelchair scale and other diagnostic devices. The integrated system is designed to increase nursing efficiency and reduce liability due to documentation errors.

Life Systems Gold Standard Customer Support includes personal in-service, guaranteed two-day replacement for Rosie systems, and dedicated account management. With capital budgets constrained, we provide our clients with a variety of payment and finance options.

Our clients include Life Care Centers of America, Golden Living Centers, Senior Living Centers and Magnolia Management.

**Geographic Area Served:** U.S. Only

**Segments Served:** SNF

## 2010/2011 Product & Service Innovations

- **RosieConnect:** The newest addition to our suite of hardware products imports information from diagnostic devices and then exports the data to a resident's record in an EMR system, eliminating keying errors.
- **Rosie Smart Wheelchair Scale:** Our new scale is portable and features automatic recalibration. Bluetooth-enabled, it wirelessly transmits the resident's weight to RosieConnect.
- **SmartCheck™:** Our Bluetooth-enabled glucose meter sends a resident's results to RosieConnect. All vitals information – including blood glucose readings – is then uploaded to an EMR, pharmacy delivery or clinical software solution.

## Suggested Co active Discussions

- **Retiring the Pen:** Your EMR or clinical software is only as accurate as the information entered into it. We'll share with you how technology is evolving to remove any possibility for human error when transferring resident information.
- **Mobilizing Your Point-of-Care:** We'll show you how leading-edge facilities use mobile diagnostic devices to bring the point-of-care to the resident – no matter where they are – to free up staff time and avoid a time lag between the care given and the care documented.
- **Facility Financial Health:** We'll show you how corporations are upgrading their information technology systems with no increase to their capital budget.
